The U.S. forklift division located in Cleveland has a professional team experienced in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

At first the domestic lift truck marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled lift trucks as part of a domestic machinery expansion venture. Sales of these goods were originally targeted to state-run firms, large scale businesses, and the armed forces. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical training grew to become the new focus for improving quality and product development.

Daewoo started the first home-based lift truck business in 1967, and quickly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's progressive technological improvements combined with sales success placed them in a position of substantial growth of their forklift business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the highly competitive North American materials handling market. This joint-venture proved highly successful for Daewoo and their lift truck product sales expanded greatly. In 1984, the company finished development of a new facility to help in manufacturing high end value-added products for export. In 1993, the company had a international sales system and started exporting versions they had developed through in-house expertise, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into overseas marketplaces.
